PROFILE

As a little boy, my favourite thing in the world was Lego. I loved how I could create new worlds brick by brick and it sparked a life-long love of design. Now fully-fledged and grown-up, I have found an industry that requires the same skills. Fitting together lots of smaller blocks whether this be building components in React or using functional programming to create something bigger and more wonderful.

As a developer, I have enjoyed working on projects from building both client and server-side with Node and React, custom JavaScript sites that analyse images to working on WordPress, Magneto 1 and 2 with experience in php and JavaScript. I have worked on 3D projects with three.js along with AI using tensor flow for classifying images and building forecasts for trends.

I have experience working in advertising on campaigns from prospecting to remarketing. My passion lies within performance driven design that is user tested. I enjoy analysis as I feel this is key to ensure statistically proven ideas are used to engage and advance business developments and break down concepts so they can be reused. In the design world, I find myself gravitating towards UX and how concepts can really influence customers.

EDUCATION & QUALIFICATIONS

University For the Creative Arts (2011 - 2014)
